agregar volumen en mysql con al ruta del .sql

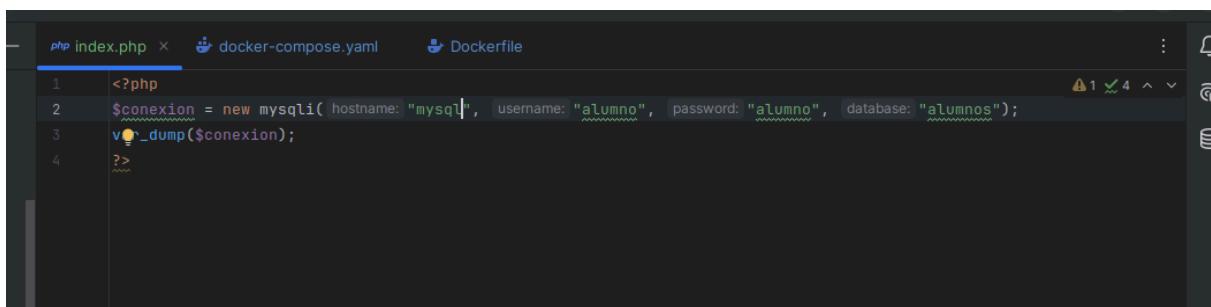

The screenshot shows a VS Code interface with a dark theme. On the left, there's a 'Project' sidebar showing a folder structure under 'docker': 'composer', 'mysql', 'web', and 'datos.sql'. A 'docker-compose.yaml' file is selected in the center editor area. The code in the file is as follows:

```
1 ➜ services:
2 ➜   web:
3     build: web
4     ports:
5       - 8109:80
6     volumes:
7       - ../../app:/var/www/html
8     hostname: web
9     container_name: web
10 ➜   mysql:
11     image: mysql
12     ports:
13       - 23306:3306
14     environment:
15       - MYSQL_USER=alumno
16       - MYSQL_PASSWORD=alumno
17       - MYSQL_ROOT_PASSWORD=case
18       - MYSQL_DATABASE=alumnos
19     volumes:
20       - ./mysql:/var/lib/mysql
21       - ./datos.sql:/docker-entrypoint-initdb.d/datos.sql
22       - ./composer:/user/bin
23 ➜   phpadmin:
24     image: phpmyadmin
25     ports:
26       - 8101:80
27     environment:
28       - PMA_HOST=mysql
29     depends_on:
30       - mysql
31     volumes:
32       - mysql:
```

CONEXION MYSQLI

```
FROM php:8.4-apache
#este servicio tiene php y apache juntos
RUN echo "<Directory /var/www/html>" >> /etc/apache2/sites-enabled/000-default.conf
RUN echo "Options +Indexes" >> /etc/apache2/sites-enabled/000-default.conf
RUN echo "</Directory>" >> /etc/apache2/sites-enabled/000-default.conf
RUN pecl install xdebug
RUN docker-php-ext-enable xdebug
RUN docker-php-ext-install mysqli
COPY --from=composer/composer:latest-bin /composer /usr/bin/composer
```

```
<?php
$conexion = new mysqli("mysql", "alumno", "alumno", "alumnos");
var_dump($conexion);
?>
```
